Table of Contents

Table of Contents **2**

Executive Summary **3**

1. Education **4**
- 1.1. Seminars and Workshops 4
- 1.2. On-demand Learning 5
- 1.3. Certification 6
- 1.4. Classroom Learning 7

2. Research and Industrial Consortium **8**
- 2.1. Guided Projects 8
- 2.2. Supported Projects 8
- 2.3. Undergraduate Research 8
- 2.4. Industrial Consortium 9

3. Service and Outreach **9**

4. Software Partnerships **9**
- 4.1. Siemens 10
- 4.2. Dassault Systèmes 10

5. Center Organization and Structure **10**
- 5.1. Infrastructure and Locations 10
- 5.2. PLM Center Legal Governance Documents 11
- 5.3. Personnel 12

6. Appendices **14**

Executive Summary

During the 2023-2024AY the PLM Center made strides in conducting digital engineering research, teaching about PLM topics, training students on PLM software, and supporting projects and classroom activities. A quantification of the center's outreach is shown in Table 1.

	Outreach to Students/Faculty	PLM Process Workshops		PLM Software Training Workshops		PLM Research Projects		
Year	Persons	Events	Persons	Events	Persons	Events	Persons	**Total**
2019	166			1	10			176
2020	448	3	123	7	119	2	2	692
2021	619	1	30	3	34	2	2	685
2022	380	14	71	8	70	3	3	525
2023	800	20	102	6	71	3	3	976
2024	**527**	**16**	**110**	**2**	**39**	**4**	**2**	**678**

Table 1: Number of events hosted by the PLM Center and attending individuals by year.

Though the live seminars and workshops diminished in attendance, the PLM Center successfully increased delivery through its on-demand learning resources available on its Canvas workgroup page. The center also established and taught a successful elective course on digital engineering to 30 senior undergraduates and 11 graduate students in the department of Mechanical Engineering. This class was supported by the drafting of a textbook describing PLM processes and tools. The PLM Center has begun championing software certification efforts in partnership with the department of General Engineering. Certifications in software from three different vendors are available through the PLM Center, with 11 students becoming certified during the latest academic year.

Assistance and training continue to be provided to students in various research projects, such as student engineering teams, senior design, and semester projects. The PLM Center led 10 students in an undergraduate research project creating a digital twin of a robotic vehicle. It also supported the publication of a digital tool intended to assist designers in CAD modeling software. Projects to provide digital twins for industrial companies (including a dock fabrication company in Seneca) were also intiated during the reporting period.

The Center continues to work towards building partnerships with various PLM vendors. In addition to the range of products from Siemens, the PLM Center has engaged with Dassault Systèmes and Ansys Inc. concerning the academic use of products. The PLM Center added a new associate director of research, Dr. Satchit Ramnath, who in addition to connections with Honda and Dassault Systèmes, leads the effort in advancing the center's industrial consortium.

1. Education

The education efforts of the PLM Center have focused on fulfilling the mission statement of providing educational tools to students, staff, and faculty at Clemson University. The motivation of these efforts lies in the importance of learning about digital engineering in contributing to modern industrial practices. To these ends the PLM Center has developed a dual teaching and experiential approach for both informing students about concepts as well as providing them hands-on experiences with PLM tools.

1.1. Seminars and Workshops

The PLM Center has put significant effort into curating a set of training modules teaching digital engineering, PLM concepts, and technical skills. A list of these modules is given in Table 2. The modules are divided into four general categories:

1. Fundamental Concepts, introducing PLM and its applications.
2. Digital Product Development, describing digital engineering activities during product design.
3. Graphical Concepts, covering functions generally performed using graphical software applications.
4. Non-Graphical Concepts, related to process and organizational based topics such as project management and systems engineering.

PLM Index	Title
1.1	Introduction to Product Lifecycle
1.2	Digital Components of PLM
1.3	PLM Functional Areas
1.4	PLM in Practice
2.1	Product Design Tools and Approaches
2.2	Data Preservation and Security
2.3	Additive Manufacturing (including 3D printing)
2.4	Data Analytics and Mining
3.1	Computer Aided Design Methods (CAD)
3.2	Computer Aided Engineering (CAE)
3.3	Two Dimensional Drawings and GD/T
3.4	System Simulation and Optimization
4.1	Project Management
4.2	Product Data Management
4.3	Engineering Change Management
4.4	Model Based Systems Engineering (MSBE)
	NX Training
	Teamcenter Training

Table 2: List of training modules and workshops developed by the PLM Center.

Seminars on these topics have been provided since the PLM Center was first established. These hour-long learning opportunities are attended by undergraduate and graduate students in various departments but primarily the Department of Automotive Engineering, Department of Mechanical Engineering, and General Engineering. The PLM Center Computer Laboratory in 352 Fluor Daniel is fully operational; similarly, classrooms on the CU ICAR campus are regularly used for

instruction. In many instances, students remotely accessed the sessions (zoom) and software (CU APPS/Citrix) from their own laptop or desktop computers. Note that attendance at these weekly workshops trended toward smaller numbers as the year progressed. Attendance numbers, which were down possibly due to lack of advertising presence, are given in Table 1.

The teaching effectiveness survey for the workshops and training sessions (refer to Appendix G) was approved by the Clemson University Institutional Review Board (IRB). During the 2023-2024 AY, this survey was deployed to participants following all training sessions, though an insignificant number of responses were collected. Further efforts to incentivize this survey will continue during the upcoming (2024-2025) year.

1.2. On-demand Learning

For the first time, the PLM Center is also making these seminars available on-demand. This is accomplished via a website hosted on the Learning Management System Canvas as a workgroup page. This project was initiated during the 2023-2024 academic year and represents a dynamic repository of information, tutorials, and guides for students. The Canvas webpage also provides users information about the PLM Center, available resources, and contact information. The Canvas page is broken into three focuses, shown in the following sections.

1.2.1. Seminars and workshops

This site focus, shown in Figure 1: Views of seminars and workshops listed on Canvas (left); and view of individual module with recording and related references (right).Figure 1, is where past presentations are listed and made accessible for viewing. Pages for each specific module have also been developed showing the latest recording as well as related information, references, and links of topics for further investigation.

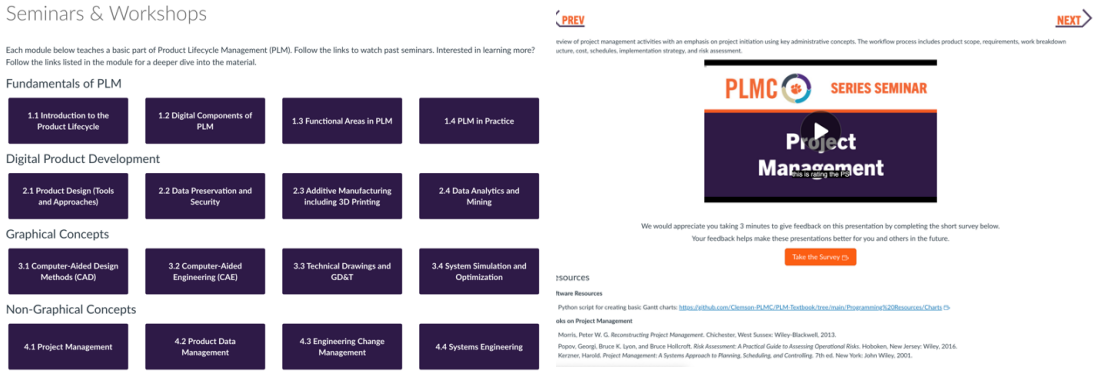

Figure 1: Views of seminars and workshops listed on Canvas (left); and view of individual module with recording and related references (right).

1.2.2. Software Resources

This section overviews various software applications and platforms used in digital engineering. This includes CAx software such as SOLIDWORKS, NX, Onshape, and Ansys, as well as scripting platforms like MATLAB, Simulink, and Arduino and languages such as Python. Each page provides tutorials for how to use the software, links to references and documentation, and in

some cases guided trainings provided on-demand by the PLM Center. The site also provides access information curated for Clemson students, such as which packages are available at locations. Finally, the site provides resources for certification. Screenshots of these pages with resources are shown in Figure 2.

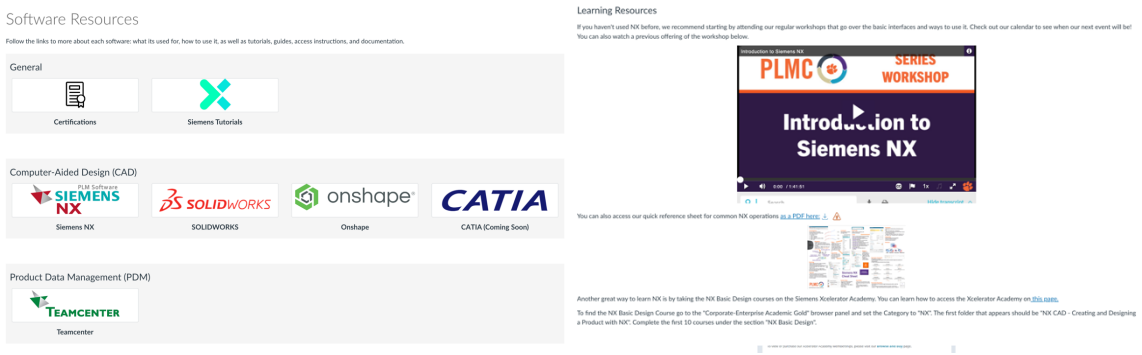

Figure 2: Screenshots from the Canvas page showing some of the software resource pages available (left); and a selection of the guide to Siemens NX (right).

The high value computer packages in the PLM Center may be accessed after Clemson University students have completed a short on-line training program that emphasizes best software practices. The creation of this training was championed by Trae King (CECAS CORE); the materials are hosted on the Bridge training platform. This training is required for students accessing software resources on the Canvas page.

1.2.3. Learning Guides

This section of the site has not been fully by the end of the reporting year. This section will host more lengthy discussions on topics and avenues of exploration not covered in the earlier sections, such as discussions on vendors, research projects, and guided tutorials. It is planned to add such items during the coming years.

1.3. Certification

During the reporting year, the PLM Center partnered with the Department of General Engineering to provide certifications for SOLIDWORKS using PLM equipment. The Canvas page helps students to sign up for certification exams (using vouchers made available by Dassault Systèmes) and provides study guides and exam requirements. Students are able to take the certification exam using workstations in the PLM Center Computer Laboratory.

Though the pipeline for certification is still being fully developed, 11 students were able to take their examinations during the 2023-2024 academic year in the computer laboratory. Each certification officially certificates the examinee of their technical understanding of the program. Certifications are tracked by Dassault Systèmes and can be listed on the student's resume, greatly increasing their employability.

Certifications are also freely provided for products owned by Ansys and Siemens, though no students have yet sought certification from these vendors. Note that although Siemens offers free

vouchers for academic certifications, they have currently advised academic partners to refrain from certification for the time being until they have improved their examinations.

1.4. Classroom Learning

The PLM Center supported the creation of a new senior-level elective course offered for the first time during the Fall 2023 semester. 30 undergraduate and 11 graduate students in the Mechanical Engineering departments enrolled in the course, which provided an in-depth overview of many of the PLM concepts shown in Table 2. Students in the course gained technical skills in CAD (including using the Siemens NX application), simulation, 3D printing, and drafting, as well as learning Model-Based Systems Engineering (MBSE), project management, and the role of PLM in modern industry.

Supporting the new course was the drafting of a textbook: "Product Lifecycle Management: Processes for Modern Industry," with over 250 pages of text, figures, tables, and exercises on PLM topics, as well as an original project detailing the design, production, management of a handheld pumping device. The table of contents for this textbook is provided in Appendix H, with some supplementary pages shown in Figure 3.

The Department of Automotive Engineering courses AuE 4080/6080 (Vehicle Testing & Characterization), AuE 8830 (Automotive Manufacturing), AuE 8860 (Vehicle Noise), AuE 8820 (Systems Integration Concepts and Methods), and AuE 8830 (Applied Systems Integration) used PLM software for instruction. The Department of Mechanical Engineering sophomore seminar, ME 2000, and senior capstone design course, ME 4020, received presentations to encourage student use of PLM software. Finally, the technical elective courses ME 4170/6170 (Mechatronics System Design) used PLM software in the classroom.

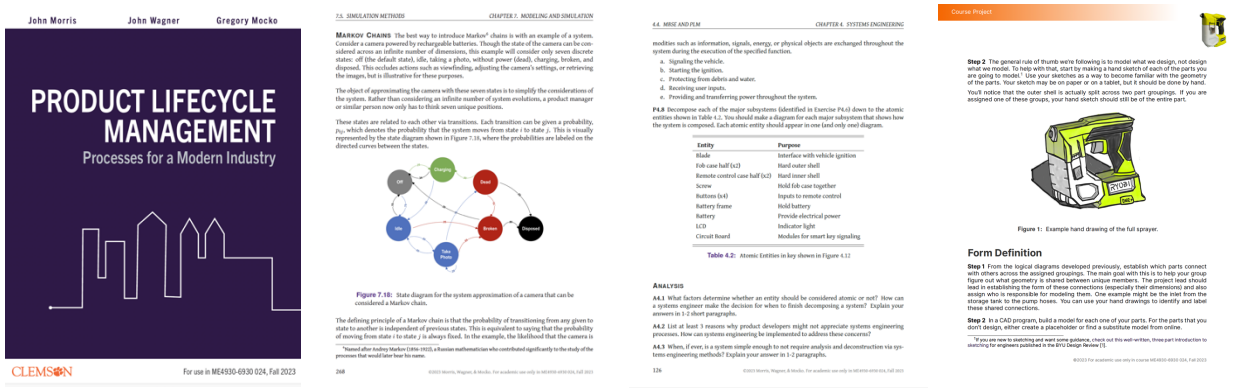

Figure 3: Pages from unpublished textbook on PLM (from left): cover; overview of Markov chains; exercises on systems engineering; project involving sketching the pumping mechanism.

2. Research and Industrial Consortium

2.1. Guided Projects

Research projects begun in the PLM Center have resulted in the graduation of three students (all in the department of Mechanical Engineering): two master's thesis students (D. Procopio, M. Kale) and one undergraduate student (F. Rowell) who finished an ME H3150 honors research. Mr. Rowell has continued this research with the PLM Center as a master's student. Additionally, a PhD student in Mechanical Engineering (J. Morris) proposed a dissertation at the end of the 2023-2024AY focusing on digital twin representation that is expected to continue throughout the 2024-2025AY.

An HVAC (chiller plant, boiler, air handling) collaboration with the Clemson University Facilities Team and Optimum Energy LLC (provider of real time monitoring software) has temporarily halted. An additional project creating a digital twin of a centrifugal pump used in the chiller plant refrigeration waste heat cycle was initiated near the end of the 2024 academic year.

The use of Product Data Management (PDM) in collaborative design teams is being studied in an ongoing project to understand how PLM affects engineering processes. This specific study is evaluating the impact that the use of Siemens Teamcenter has on student design groups, and is being performed in connection with the ME 4020 capstone design course.

Kroeger Marine, a custom dock fabrication company located in Seneca, SC engaged with the PLM Center for the purpose of fabricating a digital twin of a radial chop saw used in their facility. This project commenced during the 2023-2024AY and is expecting to be delivered at the start of the following year, with ongoing research measuring the effectiveness of its deployment continuing thereafter.

2.2. Supported Projects

The PLM Center has engaged with multiple student engineering teams to support their technology and fundamental processes. The Clemson Rocket Engineering club met with the PLM Applications Engineer and attended multiple group training sessions. The PLM Center also worked with Ansys Inc. to provide analytic software for the Clemson Formula SAE student team. More recently, a Department of Industrial Engineering graduate student has begun using PLM software (Siemens NX) for their PhD thesis.

The US Army-Clemson University VIPR GS (Virtual Prototyping of Ground Systems) has created a digital twin for off-road tracked autonomous vehicles (using Matlab/Simulink/Simscape) and support virtual collaboration on the Deep Orange 14 Vehicle Design. The DO 15 Team will be using Teamcenter beginning 2024-2025AY.

2.3. Undergraduate Research

For six continuous semesters, the PLM Center has directed an undergraduate research project sponsored by the Clemson Creative Inquiry program. This project brings in a group of undergraduates from various STEM majors with a goal of providing experiences using PLM tools while developing a digital twin of a tracked, scaled, robotic vehicle. Participation in this activity was five students in Fall and seven in the Spring semesters. Students learned Siemens NX,

performed dynamic simulation using MATLAB and Python, constructed sensors using integrated circuits, and used Arduino microcontrollers to host bespoke IoT platforms. The students presented their efforts in the 2024 Focus on Creative Inquiry Poster Session.

2.4. Industrial Consortium

The PLM Center welcomed Dr. Satchit Ramnath aboard as a faculty partner leading the expansion of the Industrial Consortium. The Industrial Consortium has been previously impacted by the COVID-19 pandemic. The PLM Center governance documents are completed and await designated Clemson University official signature.

3. Service and Outreach

The PLM Center at Clemson University has participated in outreach with South Carolina industry, the Clemson University Facilities Group, and the Pickens County Career & Technology Center. These entities have provided opportunities for student engagement and research projects, as well as outreach to companies. The South Carolina Manufacturing Extension Partnership (SCMEP) has been engaged to survey companies across the State of South Carolina regarding their use of digital technology including PLM software and Digital Twins. GE Power collaborated on a graduate student research project examining model change updates in the CAE NX software for gas turbine turbulators (2019-2021). In addition, GE Power was the inaugural member of the Industrial Consortium before the COVID-19 pandemic.

The Clemson University Facilities Group collaborated on a project (2020-2021) to create a digital twin for the East Side Chiller Plant for improved performance. A new project commenced (2022-2024) with the investigation of a “green power” HVAC system (electric boiler, AC) using a wind turbine microgrid to heat and cool a commercial building. Through periodic interaction with the local school district, Pickens County, Career & Technology Center, we maintain visibility of their student’s use of CAD software for CNC machining.

Learning materials have been created in support of the Clemson University PEER & WISE (Programs for Educational Enrichment and Retention; Women in Science and Engineering) Summer Camps Program for middle school students. Multiple day (75-minute sessions) of lecture and hands-on activities were prepared on the topic of “Mechanical Engineering Theory, CAD Drawing, and Geared Transmission Systems” using hands-on kits, SolidWorks, etc. Over several summers, K-12 students have participated in sessions located in Fluor Daniel EIB and the PLM Center Computer Laboratory.

The PLM Center maintains an emailing list of 209 individuals used to periodically advertise digital engineering events happening on Clemson campus such as vendor training sessions, seminars, or competitions.

4. Software Partnerships

The donation of licenses to Clemson University by PLM Software Vendors is a core foundational element of the PLM Center. These academic-industry partnerships need to be nurtured through collaborative efforts to ensure that the software packages are actively used for education, research, and service as outlined in the governance documents.

4.1. Siemens

Siemens Digital Industries Software provides FactoryCAD, NX, Simcenter (AMESIM), Teamcenter and other software packages including technical services. The donated software is actively used across the Clemson University campuses (Clemson, SC, Greenville, SC, Charleston, SC) for courses and research projects. During the Fall 2023 and Spring 2024 semesters, Teamcenter was actively used in ME 4150 (Senior Honors Thesis), ME 4930/6930 (Model Based Systems Engineering), and Deep Orange Teams for classroom and vehicle design activities.

The Siemens software is supported by their online Xcelerator Academy learning platform. All students, faculty, and staff can be provided access to the training content through the PLM Center via the CECAS Core Team (Mr. Trae King). The platform provides self-paced tutorials for the Siemens NX (CAD, CAM) and Teamcenter applications as well as additional training through their resource center. The Siemens NX basic features and Xcelerator Academy (Learning Advantage) setup were placed into a self-guided presentation by the PLM Center. Furthermore, Siemens has diligently provided onsite campus training and online technical support for their software packages throughout the academic year.

4.2. Dassault Systèmes

Dassault Systèmes previously provided the complete 3D Experience online PLM platform which included CATIA, DELMIA, ENOVIA, and SIMULIA. Some of these software packages were introduced into the technical elective course ME 4710 (Advanced Computer Aided Engineering and Design) when available. Students were required to design and analyze their design projects using these tools. Dassault Systèmes offered online training video(s) which were effective in getting students started with 3D Experience.

Over the 2019 Summer, Dassault Systèmes (F. Salako) provide three days of onboarding training for the 3D Experience. Participates learned how to use the new platform and create engineering projects. In the 2020 Spring, they brought the “Simulation on Wheels” to Clemson main campus to demonstrate their software applications. This event had strong participation with participants immersed in simulation, virtual reality, and augmented reality applications. However, the visit ended early due to the COVID-19 virus and corporate decision to cease travel. Currently, no Dassault Systèmes software is widely available on campus except for SOLIDWORKS. Dr. S. Ramnath obtained the use of three seats of CATIA for use in on campus research projects in partnership with Honda.

Recent discussions with the Dassault Team (19 September 2022, Summer 2023) have focused on the addition of further CATIA software seats for the Department of Automotive Engineering and PLM Center to support Model Based Systems Engineering (MBSE) activities.

5. Center Organization and Structure

5.1. Infrastructure and Locations

PLM Center Computer Laboratory: 352 Fluor Daniel EIB

The PLM Center offers a space for students to collaborate on their virtual design and research projects. With each PLM Overview presentation, students are invited to request access to the laboratory which is controlled through electronic cards. Students have card access to 28 high end workstations 24 hours per day, 7 days a week. Each workstation has the latest software from Siemens and Dassault Systèmes. Students are provided with training programs to begin learning to use these software packages. This training is explained in more detail in the software partnerships section of this report. The center also features white boards and project for student to practice presentations and discuss their projects.

Physical access to 352 EIB is electronically controlled by a door lock; Mr. Austin Breazeale in the ME Machine Shop (lower level of Fluor Daniel) provides access to students upon written request. Students may request access electronically via a form provided on the center's website.

Starting in March of 2025, the PLM Center will begin a relocation for the PLM Center Computer Laboratory. Several of the workstations will be moved to the high bay project area in Fluor Daniel to provide access to engineering students engaged in senior design and other projects. The remaining workstations will transition to a new space on the second floor of Fluor Daniel. Functionality, resource provision, and available software will not be affected by this move.

PLM Applications Engineer Office: 328A Fluor Daniel EIB

Website: https://www.clemson.edu/centers-institutes/plm/index.html

Email address: plmcenter@clemson.edu

Canvas: Workgroup page entitled "PLM Center" (hosted by jwagner@clemson.edu)

- Link to enroll (available for university personnel): https://clemson.instructure.com/enroll/AMDEFW

5.2. PLM Center Legal Governance Documents

The PLM Center Director continued to work with Dr. Anand Gramopadhye (CECAS Dean), Ann Marie Alexander (Assistant Vice President, Strategic Corporate Partnerships) and Clay Grayson (Grayson Law Firm, Mt. Pleasant, SC) at the request of Clemson University Office of General Counsel (Chip Hood) to revise the PLM Center governing documents. After extensive revisions, these four governing documents have been completed and await Clemson University signature:

- PLM Center Charter
- PLM Participant Agreement – Joinder Agreement
- Participant Designation Chart
- Policy Regarding Participant-Involved Scientific Research Projects

Siemens Digital Industries used the existing Software License & Services Agreement (#60035586) and "Software License Clarification Letter" (dated 22 February 2022) for the Clemson University partnership which now lists education and research opportunities within the PLM Center context.

The focus will shift to Dassault Systèmes with the governance documents. Discussion have occurred with Dassault Systèmes, the Department of Automotive Engineering, and the PLM Center regarding the use of CATIA for Model-Based Systems Engineering (MBSE).

5.3. Personnel

The PLM Center is led by Professor John Wagner working closely with the PLM Applications Engineer, John Morris, to create learning materials, deliver educational programming, guide research, and provide campus outreach. Dr. Satchit Ramnath serves as the associate director of research, focusing on creating valuable partnerships with external industry organizations. In addition, Dr. Greg Mocko provides assistance with advanced engineering design topics and research guidance. The graduate level research projects by MSME and PhD students are within the Department of Mechanical Engineering. Recently, the Deep Orange (DO) Vehicle Teams on the CU ICAR Campus have begun using Siemens NX and Teamcenter which offers new outreach activities.

To complete the Governance Documents, an appointed Clemson University Leader must sign off on them. Over the past several years, we have worked with Dr. Anand Gramopadhye (Dean, College of Engineering, Applied Science, and Computing), Ann Marie Alexander (Office of Corporate Partnership), Attorney Clay Grayson (external), and Siemens.

The financial materials have been handled by the accountant(s) in the Department of Mechanical Engineering and CECAS Business Office. Updates to the PLM Center at Clemson University website were completed by Kimberly Williams, CECAS PROMO.

The official personnel associated with the center is as follows:

Director – John Wagner, PhD, PE
Professor, Department of Mechanical Engineering
212 Fluor Daniel EIB, 864-656-7376, jwagner@clemson.edu

Associate Director of Education and Training – Greg Mocko, PhD
Associate Professor, Department of Mechanical Engineering
243 Fluor Daniel Building, 864-656-1812, gmocko@clemson.edu

Associate Director of Research – Satchit Ramnath, PhD
Assistant Professor, Department of Mechanical Engineering
210 Fluor Daniel Building, 864-656-6248, sramnat@clemson.edu

PLM Applications Engineer – John Morris
PhD candidate, Department of Mechanical Engineering
328A Fluor Daniel EIB, 801-850-3126, jhmrrs@clemson.edu

Industrial Partnerships – Ann Marie Alexander
Assistant Vice President, Office of Corporate Partnerships and Strategic Initiatives
405 S. Palmetto Blvd – Office 439A, 864-506-6628, amalex@clemson.edu

5.3.1. PLM Applications Engineers

In the Fall 2018, a nationwide search was conducted to hire a PLM Applications Engineer. In March 2019, Eric Lambert left ABB (Greenville, SC) and joined Clemson University as a Lecturer in the Department of Mechanical Engineering with full time responsibility to the PLM Center. He helped to launch the Center over a 13-month period before departing for GE Power (Greenville, SC) in April 2020 to be an Additive Operations Engineer.

In August 2020, Chengshi (Charles) Wang was hired as the Applications Engineer for 10 hrs/wk while also teaching ME 3070 (Foundations of Mechanical Systems) in the Department of Mechanical Engineering. We appreciate the cooperation of Dr. Atul Kelkar, Mechanical Engineering Department Chair, in this joint student lecturer appointment. He graduated in December 2020 and joined Argonne National Laboratory (Chicago, IL) as a Post Doc.

In June 2021, John Morris joined the PLM Center as the third Applications Engineer while studying for his PhD degree. Stipend and tuition waiver support will come from the US Army – Clemson University VIPR GS with the Education, Diversity & Inclusion Initiative to share digital engineering processes and tools with the students and faculty working on the virtual design of ground vehicles. Mr. Morris is regularly offering PLM training sessions and workshops on the Clemson, SC and Greenville, SC campuses. In addition, he will help lead the Creative Inquiry undergraduate research project while pursuing a doctoral degree with Dr. Greg Mocko and Dr. John Wagner with a research project exploring digitalization technology in small-medium enterprises. His expected graduation date from Clemson is December 2025.

6. Appendices

Appendix A. Available Software Packages

A listing of the donated academic and commercial software packages as championed by the PLM Center at Clemson University.

Siemens PLM Software (excess of 500 licenses, donated)

- FEMAP with NX Nastran (1)
- Fibersim Legacy (50)
- NX Academic – Core & CAD (156); NX Academic – CAE & CAM (312)
- Simcenter AMESim (70)
- Simcenter Test Lab (20)
- Teamcenter (200)
- Tecnomatix Manufacturing / FactoryCAD (82)

Dassault Systèmes PLM software

- SOLIDWORKS (site license handled by CCIT for all Clemson University students)
  - Introductory classes offered through General Engineering
  - Certifications championed by John Minor (Professor, General Engineering) and facilitated through PLM Center
- 3DS Experience – including CATIA (expired – discussions underway for new donation)

  Champion: Rob Krulac
  Senior Business Development Director
  Partnership Office
  5 Research Drive
  Greenville, SC 29607
  (864) 283-7126, rkrulac@clemson.edu
- CATIA commercial license (expired – not renewed by CECAS)

PTC PLM Software

- Onshape available for students with academic license, supported by the PLM Center
  - Enterprise edition sponsored by PTC (1)

ANSYS Simulation Software

- Site license handled by CCIT for all Clemson University students
  - Workbench
  - Mechanical
  - Fluent
  - Icepack
- Commercial packages sponsored by Ansys (1)

Appendix B. Faculty Use of PLM Center Championed Software

Assessment mapping of donated software in terms of faculty use in classes as well as research projects on the three Clemson University campuses in South Carolina.

Course/Project	Date	Instructors	PLM Software	Students
AMFG 6800: Practicum Experience in Adv Manufacturing	S24	Matthew Krugh	Simatic	10
AuE 4080/6080: Vehicle Testing & Characterization	F22	Jeff Poland	Simcenter, Testlab	37

Appendix D. PLM Center Research (Publication, Projects)

Research Project Title	Dates	Investigators	PLM Software	No. Users
Representation Learning and Design Optimization in Engineering Applications	2023-	S. Ramnath	CATIA	3
Virtual Reality Toolchains for CAD Design	2022-24	G. Mocko, C. Turner	NX, Teamcenter	2
MSME Collaborative Design Enhancements Using Teamcenter	2023-	J. Wagner	NX, Teamcenter	45
Analysis of Hypergraphs for the Representation of Digital Twins	2024-	J. Wagner, G. Mocko	*N/A*	*N/A*
Development of Digital Twins for Radial Saws in Aluminum Cutting	2023-	J. Wagner, G. Mocko	*N/A*	*N/A*
Telemedicine Systems and Compact Scanning Devices in Ambulances	2023-24	Kapil Madathil	NX	1
Exploration of Collaborative Design Spaces	2022-23	John Wagner	Teamcenter	1
Digital Twin of Boiler and HVAC System	2022-23	John Wagner	Simcenter Amesim	1
Clemson VIPR GS Center (US Army GVSC Funded Project)	2021-	Multiple	NX, Teamcenter	TBD
Digital Twin of Clemson University East Side Chiller Plant (Facilities Group)	2019-21	John Wagner	Simcenter Amesim	1
Lockheed Martin Add-In Software Evaluation	2020	J. Summers, J. Wagner	CATIA	2
Gas Turbine Turbulator Designs (GE Power)	2019-21	John Wagner	NX	1
Computational Geomechanics	2018-19	Qiushi Chen	Star CCM+	4
ARM Institute Quick Start	2018-19	V. Krovi, L. Mears	NX, Tecnomatix, Teamcenter, Jack	6
Functionally Designed Ultra-Lightweight Carbon Fiber Reinforced Thermoplastic Composites Door Assembly	2017-20	S. Pilla and G. Li	Tecnomatix, Fibersim	3
Dynamics Estimation and Control Lab	2023-	M. Schmid and L. Mears	Testlab	TBD

Appendix E. PLM Center Scholarly Publications

Book:

1. J. Morris, J. Wagner, and G. Mocko, "Product Lifecycle Management – Processes for a Modern Industry", September 2023 *(In progress)*

Conference Articles:

1. J. Morris, D. Procopio, and J. Wagner, "Dynamic Estimator of CAD Patterning Feature Execution Time", Paper #118136, DFMLC-08: DED/CIE Design Tool and Commercialization Showcase, ASME 2023 International Design Engineering Technical Conferences and Computers and Information in Engineering Conference (IDETC/CIE2023), Boston, MA, August 2023.
2. D. Procopio, J. Morris, and J. Wagner, "Evaluation of CAE Design Change Updates – A Case Study on Gas Turbine Airflow Disrupters", Paper #116761, DFMLC-06-01: Design of Product, Service and Energy Systems, ASME 2023 International Design Engineering Technical Conferences and Computers and Information in Engineering Conference (IDETC/CIE2023), Boston, MA, August 2023.
3. D. Procopio, J. Morris, and J. Wagner, "Application of Product Lifecycle Management in the University Classroom and Laboratory", T538 – Mechanical Engineering Division (MECH), Technical Session 4: Professional Preparation, ASEE Annual Conference, Baltimore, MD, June 2023.
4. J. Morris, G. Mocko, and J. Wagner, "Extracurricular Course Teaching Product Lifecycle Management Concepts to Undergraduates", T538B – Mechanical Engineering Division (MECH), Technical Session 14: Curriculum and Course Assessment in and Outside the Classroom, ASEE Annual Conference, Baltimore, MD, June 2023.

Posters:

1. Anderson, L., Zanotta, S., Coco, C., O'Neill, P., Ransom, E., Samuel, C., Thompson, S., Wagner, J., Mocko, G., Morris, J. Development of Digital Twin for Scaled Robotic Vehicle. Poster presentation at Clemson University 19th Annual Focus on Creative Inquiry Forum, Clemson, SC, April 2024.
2. Ewanick, B., Foy, V., Frabotta, A., Minnich, A., Anderson, L., Rice, B., Bishop, W., Thompson, S., Wagner, J., Mocko, G., and Morris, J, "Exploring Digital Technologies - A Focus on PLM Concepts and Software with Application to Scale Track Vehicle", Poster presentation at Clemson University 18th Annual Focus on Creative Inquiry Forum, Clemson, SC, April 2023.
3. Beuckman, C., Calamari, M., Gossett, S., Wanthal, N., Schumm, B., Morris, J., Mocko, G., and Wagner, J., "PLM Processes and CAD/CAE Tools with Application to Vehicle Component Design", Poster presentation at Clemson University 17th Annual Focus on Creative Inquiry Forum, Clemson, SC, April 2022.

PLM Center Directed Research Projects:

1. Kolangarakath, A., (MS IE), "Telemedicine Systems and Compact Scanning Devices in Ambulances", (May 2024).
    a. Research project with advisor Dr. Kapil Madathil that will use Siemens NX software to design and develop 3D models of an ambulance, stretcher, and scanners.

2. Rowell, F., "Application of Siemens Team Center in Engineering Collaborative Projects at Clemson University", *Honors Thesis*, (May 2023).
    a. Senior mechanical engineering student with experience using TeamCenter from two internships at E-Z-Go (Augusta, GA) will explore its application in Creative Inquiry (ME 2900/3900/4900) and Deep Orange (AuE Department, CU ICAR) team settings.

3. Kale, M., (MS ME), "Development and Application of a Digital Twin for Chiller Plant Performance Assessment", (December 2021).
    a. A graduate research project with Dr. Wagner, Clemson University Facilities Group, and Optimum Energy (Seattle, WA). He created a digital twin of the East Side Chiller Plant on the Clemson, SC campus using Siemens SimCenter AMESIM. The digital twin features four-loops - refrigeration (chiller), condenser water (cooling towers), chilled water (evaporator), and building side air. It included components such as compressors, pumps, heat exchangers, and fans. SimCenter AMESIM provides graphs to verify and validate against the available monitoring data collected daily by the Facilities Group. The goal was to create a tool to help in the monitoring and predictive maintenance of these HVAC plants.

4. Procopio, D., (MS ME), "Product Lifecycle Management – Application of Patterning Methods to Gas Turbine Blades and Creation of Learning Materials", (December 2021).
    a. An advanced CAD research project with General Electric (GE Power) and the PLM Center to evaluate the time requirements for design changes in automatic software generated patterns. He explored the amount of time required for model modifications to cascade through a complex component CAD description once it was changed from the original state. Using Siemens NX and gas turbine turbulator modeling (surface discontinuities inserted inside blades to promoted heat transfer with air flow disruptions), the automatic pattern generators and blade geometry processing time were studied. In addition, he helped to create learning materials for the K-12 outreach efforts including the 1-page assessment survey to gather student feedback.

Appendix F. Overview of Developed PLM Modules

PLM-1.0: Fundamental Concepts

1.1 Introduction to the Produce Lifecycle

An introduction to Product Lifecycle Management with coverage of the fundamental concepts. Insight given on the development of PLM strategies and evolution to the current practices. Each phase of process is described with examples of the actions, activities, and ideas that occur within an organization.

1.2 Digital Components of PLM

A general overview of computer-aided-design (CAD), -engineering (CAE), and -manufacturing (CAM) as well as engineering data management (EDM) and digital manufacturing (DM) design capabilities. The topics of PLM data and accompanying product data management (PDM) tools plus enterprise resource planning (ERP) are introduced.

1.3 PLM Functional Areas

Opportunities to collaborate across the business enterprise are reviewed using PLM concepts within a standard configuration. Companies organize about core skills (functional areas including product management, engineering, manufacturing, supply chain, support) which are reviewed, and their interactions highlighted during production.

1.4 PLM in Practice

An example product is developed using PLM concepts to demonstrate the process. The PLM functional areas are discussed with the tasks of product conception, development, realization, field service, and end-of-life. Opportunity exists for student identified virtual product applications to work through the various tasks.

PLM-2.0: Digital Product Development

2.1 Product Design Tools and Approaches

One challenge when adopting PLM tools is the reorganization of existing engineering processes to align with the digital tools and standardize the workflow. Through a case study, the primary steps and possible pitfalls when implementing a digital process are discussed.

2.2 Data Preservation and Security

The rigorous saving of digital data to preserve design data as well as the implementation of computer security and information protocols must be considered when transitioning to a digital workflow process. Best practices and accompanying challenges will be discussed with attention focused on working with information technology specialists.

2.3 Additive Manufacturing

The growth in 3D printing and other additive manufacturing processes can support the rapid transition from virtual to physical prototype. The output of CAD/CAE computer programs (STL – Standard Triangulation/Tessellation Language) can be directly interfaced to additive printers to create layer-by-layer polymer, metal, composite parts. This course explores the transition from digital to actual components with attention focused on common processes.

2.4 Data Mining and Analytics
Big data and product lifecycle management – what is the connection? In this course, the raw data generated from digital simulations, product field operation, and other sources will be statistically analyzed to identify trends, patterns, and other important features.

PLM-3.0: Graphical Concepts

3.1 Computer Aided Design Methods (CAD)
Insight into design for excellence and lean product development by explaining strategies for computer-aided-design (CAD) models and assembly reuse. The course also covers additional assembly and modeling concepts such as modeling in space and associate modeling.

3.2 Computer Aided Engineering (Design / Assembly)
An introduction into computer-aided-engineering (CAE) methods with focus on efficient creation and reuse of simulations. Explanation of common product development practices and how PLM technology allows for more developer control through concurrent design.

3.3 Two Dimensional Drawings and Geometric Dimensioning / Tolerancing
A graphics primer course that examines the concepts of form, fit and function (FFF). The importance of FFF and how it is used to specify product with a large emphasis on geometric dimension and tolerancing (GD&T) are covered through theory and example.

3.4 System Simulation and Optimization
A sequential demonstration of simulation and optimization graphical concepts and tools useful in research projects. The discussion focuses on multi-disciplinary systems including the integration of electro-mechanical components into complex assemblies.

PLM-4.0: Non-Graphical Concepts

4.1 Project Management
A review of project management activities with an emphasis on project initiation using key administrative concepts. The workflow process includes product scope, requirements, work breakdown structure, cost, schedules, implementation strategy, and risk assessment.

4.2 Product Data Management
The basics of product data management (PDM) and repository development are covered in this course. The topics include product structure, configuration management, requirements modeling, SysML, analysis data management, interoperability, and data exchange.

4.3 Engineering Change Management
Students will learn the sequence of tasks to be completed to drive improvements in a product or work process. The workflow for engineering change will be discussed and examples offered on how changes in engineering information may propagate through the engineering database.

4.4 Model Based Systems Engineering (MBSE)
The creation of computer models and supporting virtual framework to support the design, analysis and management of complex physical systems through requirements, simulation & analysis, systems integration, verification & validation, and change management.

PLM Software Training and Help Sessions

Siemens NX Software – Basic Features with Application
Learn how to use select features of the NX software package and apply this computer-aided-engineering tool to design a component on the PLM Center Computer Laboratory machines.

Dassault Systèmes Software – Introduction and Applications
PLM software package used for three-dimensional design. Learn some of the digital engineering tool's primary features and practice on creating virtual parts.

Siemens Teamcenter Software - Introduction and Basic Features
Fundamental concepts in Teamcenter shared in slide package; ME H4150 deliverable.

Appendix G. Student Assessment Survey (IRB Approved)

Evaluation of PLM Center at Clemson University Sponsored Workshops and Seminars

Please carefully consider each of the following questions while considering only the most recently attended workshop / seminar. The estimated time to take this survey is less than 5 minutes.

Question 1 - The concepts in the workshop / seminar were interesting to me.
1) Strongly Disagree, 2) Disagree, 3) Neither Agree nor Disagree, 4) Agree, 5) Strongly Agree

Question 2 - The workshop / seminar has motivated me to continue learning about PLM topics.
1) Strongly Disagree, 2) Disagree, 3) Neither Agree nor Disagree, 4) Agree, 5) Strongly Agree

Question 3 - The workshop / seminar was well-organized, and it clearly explained digital concepts.
1) Strongly Disagree, 2) Disagree, 3) Neither Agree nor Disagree, 4) Agree, 5) Strongly Agree

Question 4 - The workshop / seminar clearly established the relevance of the topics to business and industry.
1) Strongly Disagree, 2) Disagree, 3) Neither Agree nor Disagree, 4) Agree, 5) Strongly Agree

Question 5 - The knowledge gained in this workshop / seminar will positively impact my (future) academic studies and/or professional career.
1) Strongly Disagree, 2) Disagree, 3) Neither Agree nor Disagree, 4) Agree, 5) Strongly Agree

Question 6 - Which of the following would have the greatest impact in making the workshop / seminar more effective? (Multiple responses may be selected)

- ☐ Revise the presentation content.
- ☐ Improve the presenter's delivery and/or communication skills.
- ☐ Provide more examples, demonstrations, and/or walkthroughs of digital concepts.
- ☐ Offer better access to PLM software and/or learning resources.

Question 7 – What interested you in attending this event?
(Free Response)

Question 8 - Please share any suggestions you have about the workshop/seminar, the PLM Center, PLM software tools and processes, or future offerings.
(Free response)

Question 9 - Would you recommend this workshop / seminar to a friend or colleague (Yes/No)? Why?

- ○ Yes
- ○ No

(Free response)

Question 10 – What is your academic/professional status?

- ○ Freshman

- Sophomore
- Junior
- Senior
- Graduate student
- Clemson University faculty/staff
- Technical professional
- Other

Thank you for your time and responses. If you have any questions or concerns, please reach out to the Product Lifecycle Management Center at plmc@clemson.edu.

Your responses will be part of an ongoing research study being conducted by the PLM Center directed by Dr. John Wagner. Specific questions about this research can be addressed to him at jwagner@clemson.edu.

Appendix H. Table of Contents of PLM Concepts Textbook

Contents

About this Book iv

1 Introduction to PLM 1
- 1.1 Concepts and Definitions 1
- 1.2 PLM Examples 10
- 1.3 Historical Overview 17
- 1.4 Modern Applications 23
- Exercises 28
- Activity 1: Setup 31

2 PLM in Practice 34
- 2.1 Common Tools 34
- 2.2 Engineering Functions 42
- 2.3 Functional Areas 53
- Exercises 58
- Activity 2: Requirements 60

3 Project Management 63
- 3.1 Fundamentals of Project Management 64
- 3.2 Project Planning 69
- 3.3 Effective Project Management 81
- Exercises 87
- Activity 3: Project Management 91

4 Systems Engineering 94
- 4.1 Introduction to Systems 95
- 4.2 Systems Engineering Method 102
- 4.3 Model-Based Systems Engineering 110
- 4.4 MBSE and PLM 121
- Exercises 123
- Activity 4: Systems Engineering 128

iii

5 Computer-Aided Design 132
- 5.1 Form 132
- 5.2 Overview of CAD 134
- 5.3 Engineering Graphics 136
- 5.4 Modeling Paradigms 156
- 5.5 3D Modeling Operations 161
- 5.6 Product Data Filetypes 174
- 5.7 Best Practices in CAD 177
- Exercises 185
- Activity 5: Form Design 189

6 Product Data Management 193
- 6.1 Introduction to PDM 193
- 6.2 Overview of PDM 198
- 6.3 Components of PDM 201
- 6.4 PDM Operations 212
- 6.5 Effective Implementation 219
- Exercises 228
- Activity 6: PDM Integration 234

7 Modeling and Simulation 236
- 7.1 Introduction to Simulation 236
- 7.2 Computer-Aided Engineering 240
- 7.3 Machine Representation 241
- 7.4 Numerical Methods 245
- 7.5 Simulation Methods 264
- Exercises 279
- Activity 7: Modeling and Simulation 282
